

Entity Relationship Diagram- Spotify

Project Members: Nathan Nguyen, Cherish Chen, Aakash Baheti, Molly Banks

The industry that we have chosen to work with is the Music Streaming Services Industry, specifically Spotify. Information about a person's listening habits, playlists, preferred genres, preferences, and maybe even their demographics are examples of user data. Our database can help answer questions that will be relevant to create internal and client-facing data reports. This information is gathered by Spotify in order to improve user experience, offer tailored suggestions, and advance its overall service.
